What is memory care?

Memory care is designed to provide a safe, structured environment with set routines to lower stress for people with Alzheimer's or dementia.

There are stand-alone facilities and many assisted living facilities, continuing care retirement communities and nursing homes have special memory care “neighborhoods” for dementia patients.

Activities at these facilities, for example art and music, are designed to improve cognitive function and engage residents at different stages of the disease.

Because people with dementia are prone to wander (6 in 10 do so, according to the Alzheimer's Association), memory care facilities have alarmed doors, elevators that require a code and enclosed outdoor spaces to keep residents safe on site.
